Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

1. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The language “high molecular polyamide” appears to have a word omission between molecular and polyamide.

Secondly within Claim 2, the language “or both” renders the claim indefinite, because it is unclear as to what “both” is referring to.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under U.S.C. 102b as being anticipated by Nelb, U.S. Patent No. 4672094

Patentee discloses the process for preparing high molecular weight polyamides, copolyamides, or polyester-amide block copolymer by melt-mixing a lower molecular weight polyamide, copolyamide, or polyester-amide with a blocked diisocyanate having a cycloaliphatic

or aromatic structure with phenol, lactam, alcohol, or oxime blocking agents. See column 2, lines 30-32 and lines 36+, column 4 lines 32-36 and lines 58-63.

Patentee discloses a diisocyanate range overlapping 0.05-4 wt% giving sufficient specificity to constitute anticipation. Patentee further discloses that melt mixing is done in twin screw extruder. See column 15, lines 48-50 and lines 59-64.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Al Ghatta, U.S. Patent No. 5376734, shows a process for preparing high molecular weight polyesters by melt-mixing lower molecular weight polyesters with 0.05-2 wt% diphenylmethane diisocyanate in a twin screw extruder.
